ONE WEBSITE SOLUTION INTRODUCES 6-IN-1 SSL CERTIFICATE
New Offering Enhances Web Site Security, Savings & Customer Confidence

Scottsdale, Ariz. (June 20, 2007) – One Website Solution – Helping you succeed on the web, now offers a new 6-in-1 certificate for assuring Web site security while saving online businesses time and money.

By applying the powerful influence of one industry-standard, Secure Socket Layer (SSL) Certificate with up to 256-bit encryption across as many as six Top Level Domains, Web site managers can reduce costs while providing a unified security experience for online customers.

An SSL Certificate enables encryption of online transactions and communications. The 6-in-1 SSL Certificate from One Website Solution offers a new level of simple, cost-effective security service. With many businesses, purchasing all six variations of their domain name to protect their online identity, One Website Solution's new 6-in-1 certificate provides a one-step, cost-saving solution.

Customers can purchase one SSL Certificate to protect all six Top Level Domains (TLDs) including .com, .net, .biz, .info, .us and .org. Until now, separate certificates would have to be purchased to protect each domain name. Each domain name secured under the new 6-in-1 SSL must point to the same Web site.

Before this product was available, Web site managers would have to purchase either an SSL Certificate for a single TLD or buy as many as six – creating the potential for security warnings in customers' Web browsers or high costs for multiple certificates. With this new 6-in-1 SSL Certificate, e-businesses can save up to 54 percent over the cost of purchasing individual certificates.

For more information about the new 6-in1 SSL Certificates, visit www.1websitesolution.com
